

Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1-7: Canceled.

Claim 8. (Currently Amended) A snow board with a divided gliding surface, ~~characterized by~~ comprising:

a basic body ~~(10)~~ consisting of two gliding members ~~(2,3)~~ and an elongate web ~~(4)~~ provided between the gliding members ~~(2,3)~~, lateral slots ~~(11)~~ being provided between the gliding members ~~(2,3)~~ and the elongate web ~~(4)~~, and the transition sites of between the elongate web ~~(4)~~ with the and forward and rear sections ~~(5,6)~~ of the basic body ~~(10)~~, said transition sites being curved.

Claim 9. (Currently Amended) The snow board of claim 8, ~~characterized by~~ wherein the elongate web ~~(4)~~ being is structured as a support surface for a snow boarder and the slots ~~(11)~~ between the gliding members ~~(2,3)~~ and the elongate web ~~(4)~~ having have a height of up to 5 cm, ~~preferably 3 to 5 cm.~~

Claim 10. (Currently Amended) The snow board of claims 1 and 2, characterized by wherein the glide gliding members (2,3) being in their longitudinal directions provided with have a waistline (9) extending in a longitudinal direction and spacers (8) being fixedly or movable and ~~replaceably~~ releasably arranged on the surfaces of the gliding members (2,3).

Claim 11. (Currently Amended) The snow board of claims 1 to 3, characterized by the fact that wherein the releasable connection of the spacers elements (8) are releasably connected with the gliding members (2,3) ~~is provided by an insert (7)~~.

Claim 12. (Currently Amended) A snow board, comprising:

an elongated unitary body of predetermined length forming first and second gliding members extending along opposite lateral margins thereof;

an elongate web extending between the first and second gliding members and being joined to forward and rear sections of the body in a curved transition and separated from the first and second gliding members by lateral slots.

Claim 13. (Previously Presented) The snow board of claim 12, wherein the elongate web protrudes from the surface of the body by from 3 to 5 cm.

Claim 14. (Previously Presented) The snow board of claim 12, wherein the first and second gliding members have elongated lateral margins of concavely curved configuration.

Claim 15. (Previously Presented) The snow board of claim 13, wherein the elongate web is provided with means for connecting bindings.

Claim 16. (Previously Presented) The snow board of claim 15, wherein the means for connecting bindings comprises inserts.

Claim 17. (Previously Presented) The snow board of claim 15, wherein the means for connecting bindings comprises a rail extending longitudinally of the elongate web and includes means for adjusting the position of the bindings.

Claim 18. (Currently Amended) The snow board of claim 15, further comprising spacers of a height substantially equal to ~~the~~ a protrusion of the elongate web and attached to one of the gliding members and the bindings.
